All good questions. I will clarify with the RM up here and adjust or rescind accordingly. I included that one as a contingency as I was adapting these from other incident JHAs. Bill Rhotenberry indicated this AM that he anticipated that they would typically use heavy equipment to crush the empty drums and load them into a roll-off for disposal, but I will confirm. That approach deserves its own JHA. Fortunately we're an operational period or two away from getting containers rolling to the pad, so there's time to sort this out today.

Also, we had a near-miss incident yesterday that didn't get captured on my 214 as I didn't get word of them until this AM. First one was a lug nut on the roadway that had been kicked up by another vehicle and smashed the windshield of one team's rental car.

Steve, these look really good. One thing I wanted to ask - on the drum cutting operations, if they are metal drums, is the cutter operator wearing special cut resistant or cut proof attachments to the top of their boots and/or lower leg?

David,

Sorry for the late submission. Was on the phone with George for a long time discussing my replacement and what's going on in Bravo Branch with respect to safety. Attached please find all the JHAs for orphan container recovery at the staging/disposal pad. Also, the ICS214 for the day. Please let me know if you have any questions.

Thanks!
